

Lighting technology has changed considerably recently. **Are you still using outdated lighting systems that waste energy?**

With new integrated lighting and controls, you can reduce your energy and maintenance costs and increase sustainability.

## OUR ENERGY AUDIT PROCESS

Our energy consultants utilize a four-step process to collect information, assess financial considerations, provide recommendations and assure proper implementation so you receive a well founded plan with a minimum of risk.

**OffGrid Renewable Energy Consultants** will take this information and generate an integrated solutions audit report and recommendation specific to your building and site. We can provide a Quick-Audit report that gives you an overview of how you can save operational dollars all the way to a highly detailed, value specific audit that compares various systems with supporting facts, figures and documentation that defines the benefits provided. Complete ROI analysis helps to keep any hesitation at a minimum.

*To assure your new integrated lighting solution runs smoothly OffGrid Energy Solutions can help with the purchase and installation of your new system.*
